

CMOS type sensor 5C-SSM

【Measurement data】Skin gas

scentif.ai®

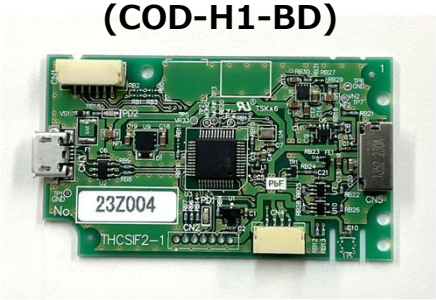

Preparation for measurement

scentif.ai®

Smell sensor module (5C-SSM)

Drive circuit (COD-H1-BD)

microSD extension cable (Products on the market)

Secure the sensor to the end of the extension cable and install the spacer.

Attach to the measurement position.

Drive circuit

Measurement data : Changes in Sensor Output During Beverage Consumption

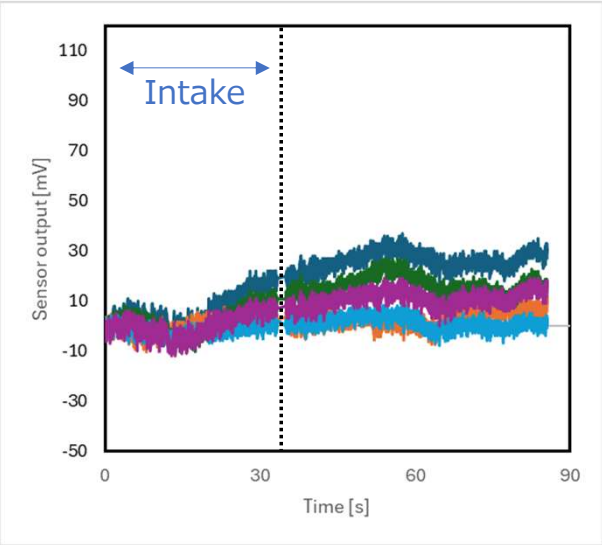

scentif.ai®

Experimental Conditions
- **Subjects:** 3 individuals
- **Consumed Samples:** Beer, soft drinks, tea (approximately 500mL)
- **Consumption Duration:** Approximately 30 minutes (followed by 1 hour of continuous measurement)

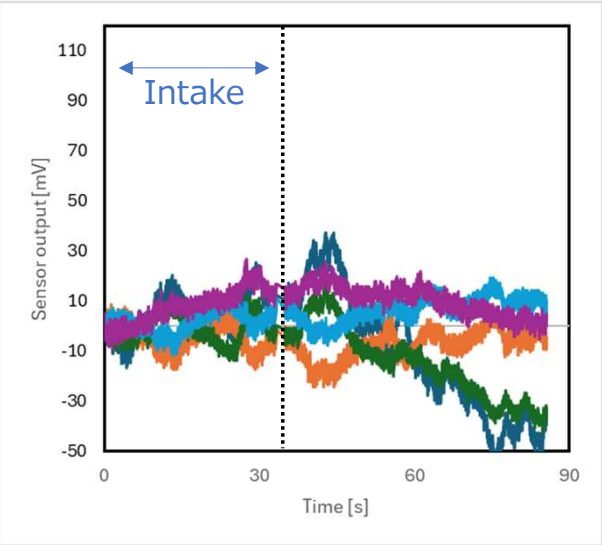

1) Beer

2) Soft drink

3) Green tea

Results
- The largest sensor response was observed during beer consumption
- Response patterns also differed depending on beverage type
